DETAILED ACTION

Allowable Subject Matter

1. Claims 1 - 10 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present invention of claims 1 - 10 is directed to a device for recording digitally encoded video information on a record carrier according to a predefined recording format

Independent claim 1 identifies the unique distinct feature "message means for extracting messages from the data stream, the messages containing the application data objects and parsing means for generating application control information and control means for storing the messages in a message file separate from the real-time information as a series of the messages for the program and for storing the application control information in a message info file, the application control information including accessing information for accessing the messages in the message file."

The closest prior art, Macrae et al (US 2005/0015803) discloses recording means for recording marks representing digitally encoded real-time information, including video information, encoded according to a predefined recording format (fig 3, 62, para 0060, fig 4, 66, para 0066 and fig 6, 98, para 0085 recording, para 0057 and 0065 recording video and para 0090) and an input unit for receiving a data stream constituting an enhanced user program, the data stream comprising the real-time information and application data objects, at least one subset of the application data objects constituting

data for providing to a user at least one interactive application while rendering the real-time information (fig 3, 58, para 0059, fig 4, 70, para 0068 and fig 6, 104, para 0081). However Macrae et al fails to anticipate or render the above mentioned underlined limitations obvious.

Hence claim 1 is allowed.

Since claims 2 - 6 are dependent on claim 1, therefore they are allowed.

Independent claim 7 identifies the unique distinct feature "control means retrieving application control information from a message info file having, been stored on said record carrier separate from the real-time information, and retrieving messages comprising a message header providing information about a respective message from a series of messages for the enhanced user program from a message file, the application control information including accessing information based upon the information about the respective message provided in the message header, said control means accessing messages in the series of messages in the message file, and retrieving the messages from the series of messages from the message file based on the accessing information included in the application control information, the messages containing the application data objects, and the message file having been stored on said record carrier separate from the real-time information."

Hence claim 7 is allowed.

Independent claim 8 identifies the unique distinct feature "a message file separate from the real-time information, the message file comprising messages having a message header providing information about a respective message, stored in a series of messages, the messages containing application data objects, at least one subset of the application data objects constituting data for providing to a user at least one interactive application while rendering the real-time information, and a message info

file separate from the real-time information and from the message file, the message info file containing application control information including accessing information based upon the information about the respective message provided in the message header, for accessing the messages from the series of messages in the message file."

Hence claim 8 is allowed.

Since claim 9 depends on claim 8, therefore it is allowed.

Independent claim 10 identifies the unique distinct feature "extracting messages from the data stream, the messages containing the application data objects; generating application control information; and storing the messages in a message file separate from the real-time information as a series of the messages for the program, and storing the application control information in a message info file, the application control information including accessing information for accessing the messages in the message file."

Hence claim 10 is allowed.

Therefore claims 1 – 10 are allowed over prior art.
